a destination defining part defining destination address information that is indicated by a user and a location different from a current location where the program is stored;

a moving part moving the program in accordance with the destination address information, wherein said moving part comprises:

a copying part retrieving the current address information corresponding to said definition name included in said control information in accordance with said definition information and copying all information which is stored at a current address indicated by the current address information, in accordance with the destination address information; and

a deleting part deleting all information stored at the current address; and

a control information changing part changing the control information based on the destination address information.

7. (AS ONCE AMENDED) The information processor as claimed in claim 1, wherein said control information comprises:

current address information indicating where the program is stored in a storage device;

definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information,

wherein said control information changing part comprises:

a changing part changing the current address information included in said control information based on the destination address information included in said definition information.

10. (AS TWICE AMENDED) A method for processing information comprising:

retrieving control information that is used to execute a program;

defining destination address information that is indicated by a user and a location different from a current location where the program is stored;

moving the program in accordance with the destination address information, wherein said moving comprises:

retrieving the current address information corresponding to said definition name included in said control information in accordance with said definition information;

copying all information, which is stored at a current address indicated by the current address information, in accordance with the destination address information; and

deleting all information stored at the current address; and

changing the control information based on the destination address information.

11.   (AS ONCE AMENDED) The method as claimed in claim 10, wherein said control information includes current address information indicating where the program is stored in a storage device, and

wherein said changing comprises replacing the current address information with the destination address information to which the program is moved.

15.   (AS ONCE AMENDED) The method as claimed in claim 10, wherein said control information comprises definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information, and

wherein said changing comprises changing said control information based on said definition information.

16.   (AS ONCE AMENDED) The method as claimed in claim 10, wherein said control information comprises:

current address information indicating where the program is stored in a storage device;

definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information,

wherein said changing comprises:

changing the current address information included in said control information based on the destination address information included in said definition information.

17.   (AS ONCE AMENDED) The method as claimed in claim 10, wherein said control information comprises program information to execute the program and data information related to data created or edited by executing said program, and

wherein said moving comprises:

moving the program; and

moving the data when the program is moved.

18.   (AS ONCE AMENDED) The method as claimed in claim 10, further comprising

installing said program.

19. (AS TWICE AMENDED) A computer readable recording medium recorded with a program code for causing a computer to process information, said program code comprising the codes for:

retrieving control information that is used to execute a program;

defining destination address information that is indicated by a user and a location different from a current location where the program is stored;

moving the program in accordance with the destination address information, wherein said code for moving comprises the codes for:

retrieving the current address information corresponding to said definition name included in said control information in accordance with said definition information;

copying all information, which is stored at a current address indicated by the current address information, in accordance with the destination address information; and

deleting all information stored at the current address; and

changing the control information based on the destination address information.

20. (AS ONCE AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information includes current address information indicating where the program is stored in a storage device, and

wherein said code for changing comprises code for replacing the current address information with the destination address information to which the program is moved.

24. (AS ONCE AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information comprises definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information, and

wherein said code for changing comprises the code for changing said control information based on said definition information.

25. (AS ONCE AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information comprises:

current address information indicating where the program is stored in a storage device;

4

definition information including at least one destination address information related to the program and including at least one definition name uniquely assigned to the destination address information,

wherein said code for changing comprises the code for:

changing the current address information included in said control information based on the destination address information included in said definition information.

26.   (AS ONCE AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information comprises program information to execute the program and data information related to data created or edited by executing said program, and

wherein said code for moving comprises the codes for:

moving the program; and

moving the data when the program is moved.

REMARKS

In the Office Action mailed on May 21, 2002, claims 1-27 were rejected under 35 U.S.C. § 102(b) as being anticipated by Stupek, Jr. et al. (U.S. Patent No. 5,586,304) ("Stupek"). The foregoing rejections are respectfully traversed.

Claims 1-27 are pending in the subject application, of which claims 1, 10, and 19 are independent. Claims 1, 7, 10, 11, 15-20, and 24-26 are amended. Care has been exercised to avoid the introduction of new matter. A Version With Markings To Show Changes Made to the specification and amended claims is included herewith.

Entry of Amendment After Final:

The Applicant respectfully asserts that the amendments presented herein require only a cursory review by the Examiner, and respectfully request that the Examiner enter such amendments.

Foreign Priority:

The Examiner has not yet acknowledged the Applicant's submission of a certified copy of
